Pham Ngoc Khoi

Software Engineer | AI-Assisted Development

khoipn21 | portfolio.khoipn.com | khoingoc456@gmail.com | (+84) 832-211-203

Summary

Full-stack engineer with 2+ years shipping production web and mobile products in TypeScript (React, Next.js, React Native) and Go. Lead contributor on 7 of 8 repositories across four products at WALA-ICT, owning features from Figma and requirements through API integration, localization, code review, and QA. Strongest in end-to-end feature ownership, real-time (WebSocket/STOMP) and OAuth flows, and the conventions and CI gates a team ships on; comfortable in Go/Node backends (REST/gRPC, JWT/RBAC, PostgreSQL, Redis, AWS). First-place winner, Sea x OpenAI Codex Hackathon Vietnam 2026 (BioWeave).

Skills

Languages	TypeScript, JavaScript, Go, Python
Frontend	React 19, Next.js (App Router), Vite, TanStack Query/Router/Table, Zustand, Jotai, React Hook Form, Zod/Yup, Tailwind v4, shadcn/ui, Mantine, Tiptap, i18next
Mobile	React Native (CLI and Expo), Expo Router, React Navigation, MMKV, Notifee/FCM, social login SDKs (Google, Apple, Kakao, Naver, LINE, Facebook), signed Android/iOS builds
Backend	Node.js, NestJS, Go (Gin, gRPC), REST, WebSocket/STOMP, JWT, OAuth 2.0, RBAC
Data & Infra	PostgreSQL, MongoDB, Redis, Docker, Nginx, PM2, GitLab CI, AWS EC2/S3, Sentry
AI-Assisted Dev	Claude Code, Codex, Cursor; author of agent skills, hooks, and workflows used daily at work
Spoken	Vietnamese (native), English (C1, professional working proficiency)

Work Experience

Full-stack Developer, WALA-ICT May 2025 – Present

- Ship outsourced e-commerce, proptech, and construction-operations products for Korean clients across 8 repositories (lead contributor on 7): Next.js/React consoles and storefronts plus React Native apps on external REST and STOMP backends.
- Bootstrapped 5 of those repositories (routing, layouts, API and state conventions, i18n, GitLab CI gates, PM2 deploy) so the 5–10 contributors on each built on one reviewed pattern instead of diverging.
- Own features end-to-end: Figma and product requirements through UI, API integration, translations in up to 9 locales, code review, and QA sign-off.

Chunji – construction site-operations portal (Next.js, 100+ routes) *Aug 2026 – Present*

- Delivered the asset-management and maintenance-repair modules (9 screens, UI through live API): CRUD with bulk registration, transfers with carrier details, comments and status history, disposal scheduling, and filtered lists with CSV export.
- Built supplier self-service (company information with material catalog, contact responsibilities, withdrawal eligibility and requests) and tenant announcements, each with Zod-validated forms and EN/KO translations.

Unrivaled – cross-border e-commerce in 9 locales (storefront, console, app) *Mar 2026 – Present*

- **Stack:** Next.js 16, React 19, Tailwind v4, TanStack Query/Table, Zustand, Zod, i18next, STOMP, Expo 56
- Rebuilt the mobile app from a WebView shell into a native Expo Router app at full web parity in 6 weeks: 28/28 routes, 124 shared components, 5 social logins, Toss payments, and a parity toolchain (route-manifest checks, Android/iOS screenshot diffs, 155 tests).
- Built the AI floating chatbot on web and mobile end-to-end, from STOMP conversation lifecycle and consultant handover to a chatbot-driven draft checkout that completes as a public checkout session, with product/order/delivery cards, image messages, and photo-OCR address entry.
- Shipped the console's CS suite for the AI bot: queue routing with takeover leases, manual-order drafting with OCR confidence, return/exchange/cancel claims, Facebook orders with bulk import, and push notifications.
- Delivered storefront auth and My Page (orders, claims, addresses, wishlist, reviews, coupons, referrals) plus console vendor onboarding, settlement, commission policies, and per-country quotas behind RBAC.

Daun – B2B wholesale e-commerce + 4 marketplaces (portal, storefront) *Nov 2025 – Sep 2026*

- **Stack:** React 19, Vite, TanStack Router/Query, Mantine, Jotai, Yup/Zod, Tiptap, i18next, STOMP
- Bootstrapped both repositories (routing, layouts, Axios/Query API pattern with a 401 refresh queue, GitLab CI) and remained lead contributor on both for 10 months (184 routes).
- Owned product registration end-to-end, the portal's largest module: variations, KC certification, disclosure templates, admin approval with draft diff and history logs, Excel bulk upload/download, and image cropping.
- Integrated Coupang, Naver, Gmarket, and Auction so suppliers list once and sell on 4 marketplaces: API-key issuance, category mapping, multi-market templates, and product transfer with SKU mapping.
- Shipped storefront commerce from cart to receipt: cart grouping and quotation print, checkout and buy-now with card, key-in, and bulk payment, stock-aware SKU selection, and OTP/business-verified sign-up.

Alpaca – property management for landlords and tenants (app + CMS) *Aug 2025 – Mar 2026*

- **Stack:** React Native 0.81, React Navigation, Zustand + MMKV, RHF + Yup, Notifee; React 19, Vite
- Took the app from empty repository to signed APK/IPA builds: onboarding, OTP sign-up, social login (Kakao, Naver, Google, Apple), role-based navigation, help requests, push notifications, charts, and reports.
- Built the CMS's core domain: building, land, room, and lease management, service-company contracts with worklogs, help-request workflow, banners, scheduled push, and dashboard KPIs.

Full-stack Developer, LECOLE Jan 2025 – May 2025

- Shipped study-workspace, question-sharing, practice-session, and streak features for an edtech product on Next.js, Supabase, and Redis, and built an LLM-backed study companion and question generator on external LLM APIs.
- Ran delivery end-to-end with Docker, Nginx, environment-based builds, issue triage, and fast follow-up fixes.

Projects

BioWeave – 1st place, Sea x OpenAI Codex Hackathon Vietnam 2026 Oct 2026

- **Stack:** Next.js 16, TanStack Query, three.js, gltf-transform, OpenAI Responses API, Hyper3D Rodin, Codex
- 3D biology-model platform: AI writes a checkable spec, the browser builds it, the community verifies it. Team of 4, 7-hour on-site hackathon; Grand Prize from the Top 5 finalists judged by OpenAI, Sea, and Shopee.
- Owned the 3D side. Built the AI mesh pipeline end-to-end: research agent with web search, one scored reference image, one paid mesh call behind an atomic claim, 115 s budget, Create/Studio UI, draft import into the library.
- Produced all 18 AI-mesh models in the 94-package library (10 prehistoric creatures, 8 plants with ontology-mapped parts) and 3 procedural lichens, each fitted to published measurements with gltf-transform.

Study Platform – Go microservices + React (sole developer) Jul 2025 – Sep 2025

- **Stack:** Go, gRPC, PostgreSQL, Docker; React, TypeScript, TanStack Router/Query, shadcn/ui
- Go microservices behind an API gateway (rate limiting, circuit breaker, retries): JWT and OAuth 2.0, RBAC, courses, enrollment, analytics, learning-path recommendations. GitHub: study-platform, study-frontend

Mijinfinn – AI Tax-compliance Assistant on WhatsApp (freelance, Polish market) 2024

- **Stack:** Python, WhatsApp Business API, LLM agents with tool calling, RAG, Langfuse
- Built a WhatsApp assistant for VAT, CIT, and PIT questions in Polish using RAG over tax regulations so every answer cites its source; agents call tax calculators and regulation lookup, traced through Langfuse.

Murmur – real-time chat (sole developer) Jul 2024 – Sep 2024

- **Stack:** Go, Gin, Gorilla WebSocket, PostgreSQL, Redis, AWS EC2/S3, Docker; React, Zustand, TanStack Query
- WebSocket chat with PostgreSQL, Redis caching, and S3 media on EC2 via Docker. GitHub: murmur-chatapp

Education

2022–2025 **VTC Academy**, Ho Chi Minh City – Full-stack Web Development (Talent Scholarship)
2021–Now **University of Science**, Ho Chi Minh City – Computer and Embedded Systems

Awards

2026 **1st place (Grand Prize)**, Sea x OpenAI Codex Hackathon Vietnam – team BioWeave
